Details

In this assignment, your task is to integrate CI workflow into your Colors web application (from Labs 1-3) using GitHub Actions. You will configure **automated linting** (process that checks source code for stylistic errors, bugs, etc. without executing it) for the HTML, CSS, and JavaScript files. Your workflow should automatically run on every push and pull request.

Learning Outcomes

By completing this assignment, you will:

- Understand the basics of CI workflows
- Use GitHub Actions to automate tasks
- Apply linting tools to improve code quality
- Debug workflow failures in a CI pipeline

Task Overview

Step 1: You will create a new branch

Step 2: Add a GitHub Actions workflow

Step 3: Configure linting tools

Step 4: Trigger and debug the workflow

Step 5: Ensure a successful final run

Submission Instructions

Submit the URL for the final commit ***after*** completing the assignment. This will look like **https://github.com/username/repository/commit/abcdef123456789 (https://github.com/username/repository/commit/abcdef123456789)** .

This commit must include: the workflow file, all configuration files, code that passes all lint checks.

Important Notes

- Do not submit lint reports or generated files
- The GitHub Actions tab is the source of truth for grading
- Ensure your repository is public
- Node.js can/must be used for setting up linting tools, not for running your application (Why? LAMP project!!!)
